

Service Structure

Milner Service Offerings

Milner's centralized headquarters will manage all implementations, training, service, supply, and billing inquiries for all of your locations. The centralized headquarters will also manage the dispatch of local technical engineers to the respective locations requiring service.

- A "Milner Total Call" is performed on every service call. This is a preventive maintenance measure done to maximize device performance and uptime.
- Replacement of parts and service consumables based on manufacturer's recommended life cycles.

Milner provides on-the-spot access to parts availability from the client's site, allowing service technicians to instantly verify stock levels and order required parts, effectively reducing equipment downtime.
